

Ser. No: 10/829,265

March 5, 2008

IN THE CLAIMS:**Please cancel claims 1-108, 110, 111, and 113****Please amend claims 109 and 112 as follows:****-- 1-108(cancelled).**

109(currently amended). A three dimensional display form, the display form comprising:

- a polyhedron defining a plurality of faces thereof and including a plurality of three dimensional forms being fitted together, each according to claim 108, each of the three dimensional forms being fitted together, each face of the polyhedron having at least one image thereon said three dimensional form including:
- a first rhomboid panel having first, second and third edges, a first fold line and a second fold line, the first and second fold lines defining a first pair of triangular panels;
- a second rhomboid panel connected to the first rhomboid panel along the second fold line, the second rhomboid panel having first, second and third edges and a third fold line, the third fold line and the second fold line defining a second pair of triangular panels;
- at least one securing flap connected to one of the first rhomboid panel edges, the first and second rhomboid panels being folded towards each other about the second fold line, the first pair of triangular panels being folded towards each about the first fold line, the second pair of triangular panels being folded towards each other about the third fold line, the securing flap being folded over and connected to one of the second rhomboid panel edges; and
- a securing media connected to at least one of the triangular panels for selective adherence to a corresponding triangular panel of an adjacent form;

Ser. No: 10/829,265

March 5, 2008

- at least two of said triangular panels of a respective said three dimensional form has an image thereon, with said respective three dimensional form being made from a collectable recreational card;
- each face of the polyhedron being one of said triangular panels of a respective said three dimensional form having an image thereon; and
- each said three dimensional form being releasably connected to an adjacent said three dimensional form of said polyhedron using corresponding said securing media thereof, so as to be re-orientable relative to adjacent said forms between at least first and second configurations of said polyhedron, said first configuration being defined by each face of the polyhedron having one respective said image portions thereon with said image portions forming a complete image with said complete image extending over an entire surface of said polyhedron, and said second configuration being defined by each face of the polyhedron having one respective said recreational image thereon,

110(cancelled).

111(cancelled).

112(currently amended). A recreational kit, the kit comprising:

- a plurality of recreational cards at least one recreation card, according to claim 87 claim 109; and
- instructions for folding the recreational card.

113(cancelled). -
